

# Project 14

## PHP Oriented Project

Select one webpage you have developed, or a new one this is your choice , and add the following features:

- Create one navigation bar and include it in all website pages: less code, increased reusability.
- Create a database and a table for your website
- Create an authentication system with login/logout/register.
- Once a user logs in, they will be able via a form to store data(of your choice) in your db.

Good Luck!
