

Project 3:

In this project you need to create web page about something that has the following requirements:

- Your webpage must have some descent styling. Use the link below to see some color pallets:
<https://coolors.co/d8dcff-aeadf0-c38d94-a76571-565676>
- A responsive navigation bar styled with css
- In this navigation bars must be at least 5 links, all of them must lead to another html file. In the navigation bar a google search box is required

2 of the navigation bar links need to be the following:

Home page

- Full width image below navigation bar
- //Above the image use some text
- Some sections with both text and images
- Images need to be responsive

Contact

- Contact form styled with css
- Use textareas, input text, radio buttons or checkboxes, style your submit button

More requirements:

- Your page must have semantic elements. Be careful of your page structure!
- All paths need to be relative.
- Use the same external css file in more than one pages.
- Use more than one external css files to at least one page.
- Use @media queries
- Use form css styling as we have learnt
- Use footer to all pages
- Use a color pallet

Tips: Your web page could be a tourist guide, a pet shop webpage or another store web page!
