

# Project 8

## jQuery oriented training

In this project you are expected to add in a previously made webpage some new functionalities using basically jQuery. You may add the functionalities mentioned below to whichever webpage you wish:

1. Add a button that slides up the page using jquery. Make an animation that slides up slowly.
2. In a form included in your webpage, when the user fills the form, if they **leave** an input field empty, add some red border.

First Name:

Last Name:

Email Address:

3. Add a datepicker jquery widget in a form of your webpage.
4. Create an option for visually impaired users (button). If they click that option then text in the home page becomes bigger and with high contrast to the background. The button needs to be removed from webpage after that

Having carefully read the files “Jquery2.pdf”, “Jqueryeffect.pdf”, “Jquerytrav.pdf”, “JqueryHTML.pdf”, “more.pdf” containing slides about jQuery concepts, track down the slides the logo

As a next step, try adding in your webpage functionalities related to each slide with the aforementioned logo.

**Good Luck!**
