

Project 12:

BootStrap Oriented Project

In this project the goal is to continue developing the website you started with Practice Project 11.

As I mentioned in the previous project, my goal is to create projects linked to one another, in order for you to develop a complete, professional website with the things we have learned.

In your website, I want you to add the following:

- A responsive navigation bar with a fixed position (choose where)
- You must include some images and some cards as we have seen them
- One page should have a form
- Use list groups, button groups, font-awesome and tooltip
- In one page you need to have a table with pagination
- Add a dynamic progress bar that fills on button click (use jQuery and Js function for this)

You may add more things in your website, based on what you need to develop

Good Luck!
