

Project 15

PHP Oriented Project

Select one webpage you have developed (you may continue using the one from the following project), or a new one this is your choice, and add the following features:

Create a database and a table for your website

Create an authentication system with login/logout/register with profile image

In a tab users' profile should be displayed

In your website there should be two user roles: admin/not admin.

When an admin user logs in, she/he should be able to view all database users and perform the following action:

- Delete a user
- Add a user
- Edit a user
- make a user admin

Good Luck!
